COMPUTER APPLICATION**

A Project Report on
“Society Complaint System”

Under the subject

Applied Software

Development-

BCAXX16334

BCA

Semester-VI, Class – A1

Submitted By:

1.Bhatt Prachi	20230503040002
2.Dabhi Daksha	20230503040005

Prof. Vivek Baraiya
Internal Guide

Prof. Kashyap Dave
Head of the Department

Academic Year
(2026-2027)

CERTIFICATE

*This is to certify that the report submitted along with the project entitled “**Society complaint system**” has been carried out by **Dabhi Daksha** under my guidance in partial fulfilment for the degree of Bachelor in Computer Application, 6th Semester of Gyanmanjari Innovative university, during the academic year 2026- 27.*

Prof. Vivek Baraiya
Internal Guide

Prof. Kashyap Dave
Head of the Department

Acknowledgement

We would also like to thank our Internal Guide **Prof. Vivek Baraiya** for helping us through our project by giving us the necessary suggestions and advices along with their valuable co- ordination in completing this project.

We also thank our parents, friends and all the members of the family for their precious support and encouragement which they had provided in completion of our work. In addition to that, we would also like to mention the university personals who gave us the permission to use and experience the valuable resources required for the project.

Thus, In conclusion to the above said, we once again thank the staff members of **Gyanmanjari Innovative University** for their valuable support in completion of the project.

Thank You,

1. Bhatt Prachi
2. Dabhi Daksha

Abstract

Managing complaints in residential societies is often a time-consuming and inefficient process when handled manually. Residents may face difficulties in reporting issues, tracking complaint status, and receiving timely updates, while society administrators struggle to organize and resolve complaints efficiently.

The **Society Complaint System** is a web-based application designed to simplify and automate the complaint handling process within a residential society. The system allows residents to register, log in, submit complaints, and track the progress of their complaints online. Society administrators can view, manage, update, and resolve complaints through a centralized platform.

The application provides features such as complaint categorization, status tracking, user authentication, complaint history, and notification updates. By maintaining a digital record of all complaints, the system improves transparency, accountability, and communication between residents and society management.

The primary objective of this project is to provide an efficient, user-friendly, and reliable solution for managing society-related complaints. The system reduces paperwork, saves time, ensures faster complaint resolution, and enhances overall resident satisfaction. Future enhancements may include mobile application support, real-time notifications, and AI-based complaint analysis for better service management.

CHAPTER 1

INTRODUCTION

A residential society consists of many residents who regularly face various issues such as water supply problems, electricity failures, sanitation concerns, security issues, parking disputes, and maintenance-related complaints. In many societies, these complaints are managed manually through registers, phone calls, or direct communication with society members. This traditional approach often leads to delays, loss of complaint records, poor tracking, and lack of transparency in the complaint resolution process.

The **Society Complaint Management System** is a web-based application designed to streamline and automate the process of complaint registration, management, and resolution within a residential society. The system provides a centralized platform where residents can easily submit complaints, track their status, and receive updates regarding their resolution. Society administrators can efficiently manage complaints, assign tasks, update complaint status, and maintain records of all reported issues.

The system aims to improve communication between residents and society management while ensuring transparency and accountability. By maintaining digital records of complaints and their resolutions, the application helps reduce paperwork, minimizes delays, and improves overall efficiency in society administration.

1.1 Existing System

Currently, complaint management in many residential societies is handled manually through complaint registers, phone calls, WhatsApp messages, or direct communication with society committee members. Residents have to personally report their issues, and society management maintains records manually.

Limitations of Existing System:

- Manual complaint recording process.
- Difficulty in tracking complaint status.
- Chances of losing complaint records.
- Lack of transparency between residents and management.
- Delays in complaint resolution.
- No centralized database for complaint history.
- Increased paperwork and administrative effort.

1.2 Problem Statement

Residential societies frequently face various maintenance and service-related complaints. Traditional complaint handling methods are inefficient, time-consuming, and lack proper tracking mechanisms. Residents often do not receive timely updates regarding their complaints, leading to dissatisfaction and communication gaps.

Therefore, there is a need for a computerized system that enables residents to register complaints online, track their status, and allows society administrators to efficiently manage and resolve complaints in a transparent and organized manner.

1.3 Objectives of the Project

The main objectives of the Society Complaint Management System are:

- To provide an online platform for complaint registration.
- To maintain a centralized database of complaints.
- To enable residents to track complaint status.
- To facilitate effective communication between residents and society management.
- To reduce paperwork and manual record-keeping.
- To improve transparency in complaint handling.

1.4 Scope of the Project

The scope of the Society Complaint Management System includes the development of a web-based application for managing society complaints efficiently.

The system allows residents to:

- Register and log in to the application.
- Submit complaints related to society services.
- View complaint history.
- Track complaint status.

The system allows administrators to:

- View all complaints.
- Update complaint status.

CHAPTER 2

REQUIREMENT DETERMINATION & ANALYSIS

Introduction

Requirement determination and analysis is an important phase in software development. It helps identify the needs of users and defines the functionalities that the system must provide. The Society Complaint Management System is designed to simplify the process of complaint registration, tracking, and resolution within a residential society. The analysis of requirements ensures that the system operates efficiently and fulfills the expectations of both residents and administrators.

2.1 Functional Requirements

Functional requirements describe the specific operations and services that the system must perform.

Core Functionalities:

User Registration and Login

- Residents must be able to register and create an account.
- Registered users must be able to log in securely using their credentials.

Complaint Registration

- Users must be able to submit complaints online.
- Users can enter complaint details such as category, description, and location.

Complaint Status Tracking

- Users must be able to view the current status of their complaints.
- Status may include Pending, In Progress, and Resolved.

Complaint Management

- Administrators must be able to view all complaints.
- Administrators can update complaint status and resolution details.

2.2 Non-Functional Requirements

Reliability

- The system should provide accurate complaint information.
- Data should be stored safely without loss.

Security

- User authentication should be implemented.
- Unauthorized users should not access complaint data.
- Sensitive user information should be protected

Performance Requirements

- The system should respond quickly to user requests.
- Complaint data should be processed efficiently.

Usability

- The system should have a simple and user-friendly interface.
- Residents with basic computer knowledge should be able to use the system easily.

Scalability

- The system should support an increasing number of users and complaints.
- Future features can be added without major modifications.

Maintainability

- The system should be easy to update and maintain.
- Code should follow proper programming standards and documentation.

CHAPTER 3

SYSTEM DESIGN

3.1 Use Case Diagram

The Use Case Diagram represents the interaction between the users and the system.

Fig1: Use Case Diagram

3.2 Class Diagram

The class diagram represents the main components of the system: the PrescriptionReader class (handles image input and AI processing), the ExtractedData class (stores medicine, dosage, and patient information), and the QueryHandler class

3.3 InteractionDiagram:

Fig3: ERDiagram

CHAPTER 4

IMPLEMENTATION

Introduction

The implementation phase transforms the system design into a functional application. The Society Complaint Management System is developed as a web-based application that enables residents to register complaints and track their status while allowing administrators to manage and resolve complaints efficiently. The system provides a simple and user-friendly interface for smooth complaint handling and communication.

4.1 Tools & Technologies Used

Frontend (User Interface)

- **HTML** – Used to design the structure of web pages.
- **CSS** – Used for styling and improving the appearance of the application.
- **JavaScript** – Used to provide interactive features and client-side validation. **Backend**
- **PHP** – Used for server-side scripting and processing user requests.
- **XAMPP Server** – Provides Apache server and MySQL database environment for development.

Database

- **MySQL** – Used to store user information, complaints, complaint status, and administrative records.

Development Tools

- **Visual Studio Code (VS Code)** – Used for coding and debugging.
- **XAMPP Control Panel** – Used to manage Apache and MySQL services. .
- **Draw.io** – Used to create Use Case, Class, and ER Diagrams

4.2 Coding Standards

The following coding standards were followed during development:

Meaningful Naming Convention

- Variables, functions, and database tables are named clearly and meaningfully.
- Example: registerUser(), submitComplaint(), complaint_status.

Proper Indentation and Formatting

- Consistent indentation is used to improve code readability.
- Proper spacing and formatting are maintained throughout the code.

Modular Programming

- Different functionalities are separated into individual files and modules.
- This makes maintenance and updates easier.

Code Reusability

- Common functions are reused wherever possible.
- Reduces code duplication and improves efficiency.

Error Handling

- Input validation is implemented to prevent invalid data entry.
- Appropriate error messages are displayed to users.

Security Measures

- User authentication and authorization are implemented.
- Passwords are stored securely.
- SQL injection prevention techniques are used.

4.3 Screenshots of Application

The following screenshots represent the major functionalities of the Society Complaint Management System

EP1	Empty complaint form	Invalid	Error message displayed
EP2	Incomplete complaint details	Invalid	Validation warning
EP3	Valid complaint details	Valid	Complaint submitted successfully

*Table 03: Complaint Submission Test Case***Test Case 4: Complaint Status Tracking**

Test Case	Input	Partition Type	Expected Output
EP1	Invalid Complaint ID	Invalid	Complaint not found
EP2	Existing Complaint ID	Valid	Complaint status displayed
EP3	Resolved Complaint	Valid	Resolved status displayed

*Table 04: Complaint Status Tracking Test Case***Test Case 5: Admin Complaint Management**

Test Case	Input	Partition Type	Expected Output
EP1	Invalid status update	Invalid	Error message displayed
EP2	Update complaint status	Valid	Status updated successfully
EP3	Mark complaint as resolved	Valid	Complaint resolved successfully

*Table 05: Admin Complaint Management Test Case***Test Case 6: Report Generation**

Test Case	Input	Partition Type	Expected Output
EP1	No complaint records	Invalid	No data available message
EP2	Existing complaint records	Valid	Report generated successfully
EP3	Filtered report request	Valid	Filtered report displayed

*Table 06: Report Generation Test Case***5.2 Test Results**

After executing all test cases, the following observations were made:

- The user registration module successfully validated user information and created accounts.
- The login module correctly authenticated registered users and administrators.
- Complaint submission functionality worked accurately and stored complaint records in the database.
- Users were able to track complaint status without any issues.
- Administrators successfully managed complaints and updated complaint status.
- Report generation functionality produced accurate complaint reports.

- The system responded within acceptable performance limits.
- No major functional errors were detected during testing.

CHAPTER 6

CONCLUSION AND FUTURE ENHANCEMENTS

6.1 Conclusion

The Society Complaint Management System provides an efficient and reliable solution for managing complaints within a residential society. The system successfully automates the complaint registration, tracking, and resolution process, reducing the need for manual paperwork and improving communication between residents and society management.

The application allows residents to submit complaints easily, monitor their complaint status, and view complaint history. Administrators can efficiently manage complaints, update their status, and generate reports for better decision-making. The centralized database ensures proper record maintenance and enhances transparency in the complaint handling process.

Overall, the system achieves its objective of providing a user-friendly, secure, and effective platform for complaint management. It helps improve operational efficiency, reduces response time, and increases resident satisfaction.

6.2 Future Enhancements

The following features can be added in future versions of the system:

- Mobile application support for Android and iOS devices.
- Email and SMS notifications for complaint status updates.
- Real-time complaint tracking and alerts.

- Online chat support between residents and administrators.
- AI-based complaint categorization and priority assignment.
- Integration with society maintenance and billing systems.
- Dashboard with graphical reports and analytics.
- Multi-language support for users from different regions.
- Document and image upload facility for complaint evidence.
- Cloud-based deployment for improved accessibility and scalability.

CHAPTER 7

BIBLIOGRAPHY

The following references were used during the analysis, design, and development of the Society Complaint Management System:

1. PHP Official Documentation – Used for server-side scripting and backend development.
2. MySQL Documentation – Used for database design, queries, and data management.
3. HTML5 Documentation – Used for designing and structuring web pages.
4. CSS Documentation – Used for styling and improving the user interface.
5. JavaScript Documentation – Used for client-side validation and interactive features.
6. XAMPP Documentation – Used for setting up the local development environment.
7. Visual Studio Code Documentation – Used for coding, debugging, and project development.
8. Draw.io – Used for creating Use Case Diagram, Class Diagram, and ER Diagram.
9. Software Engineering and Web Development Reference Books.
10. Various online tutorials and educational resources related to PHP, MySQL, HTML, CSS, and JavaScript.
